Report Overview

Start-stop system: when the vehicle is in the Stop state (non-parking state), the engine will Stop working (instead of maintaining the traditional idle speed). Meanwhile, the lubricating oil in the engine will keep running to keep the lubrication inside the engine. When the brake pedal is released, the engine will start again. At this time, because the lubricating oil keeps circulating, even frequent stops and starts will not cause wear and tear on the engine interior.

When the vehicle is in a static state, the electricity needed in the car will be supplied by AGM battery instead. And the air conditioning system, which consumes a lot of power, will also be converted into air supply mechanism. Therefore, if the static time is too long, it will inevitably affect the cold room effect or cause hot inside the car.
