Abstracts

Stored grain protectants are specialized chemical formulations or biological agents designed to safeguard harvested grains during storage by preventing or mitigating damage from pests, molds, and other spoilage factors, ensuring quality preservation and minimizing post-harvest losses. These products are essential in agricultural supply chains, particularly in regions with high humidity or temperature fluctuations that accelerate grain degradation, and they include insecticides, fungicides, and rodenticides tailored for use in silos, warehouses, and other storage facilities. The effectiveness of these protectants is evaluated based on their ability to control target organisms while adhering to safety standards for human health, environmental impact, and compliance with regulatory frameworks governing residues in food and feed products.

The global Stored Grain Protectants market size was estimated at USD 860.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.15% during the forecast period.
