### Report Overview:

Facilities that process, store, or sell grains and dried goods are at risk for infestation by stored product insects. These pests can rapidly move throughout a facility to attack dried, stored foods in grocery stores, warehouses, and processing facilities, destroying the products. In addition, some stored product insects create cocoons and webbing that can clog machinery and lead to costly downtime. Pest management is a key component of healthy living, food safety and sanitation programs. Rice elephant, saw grain thief, gluten, big grain thief, quaint pirate, longhorn pirate, wheat moth, Indian moth, pink moth, etc., are the main pests in the majority of grain production areas.

Aluminium Phosphide (AIP) is used as a rodenticide, insecticide, and fumigant for stored cereal grains. It is used to kill small verminous mammals such as moles and rodents.

Aluminium Phosphide (AIP) is used as both a fumigant and an oral pesticide. As a rodenticide, aluminium phosphide pellets are provided as a mixture with food for consumption by the rodents. The acid in the digestive system of the rodent reacts with the phosphide to generate the toxic phosphine gas.

Aluminium phosphide reacts with water or acids to release phosphine:
