Report Overview

The Stormwater Management and Treatment System refers to a set of infrastructure and practices designed to manage and treat stormwater runoff to prevent flooding, erosion, and water pollution. These systems typically include features such as retention ponds, green roofs, permeable pavement, and biofiltration systems. The primary goal of stormwater management is to mimic the natural water cycle by capturing and treating stormwater close to its source, reducing the impact of urbanization on natural water systems. By implementing these systems, communities can improve water quality, reduce flooding risks, and enhance overall environmental sustainability.
