Abstracts

A straddle monorail system is a type of elevated railway in which trains run on a single rail or beam, with the vehicles straddling the track structure; this design allows the system to operate above ground level, minimizing land use and providing grade-separated transit that avoids interference with existing road traffic. The system typically consists of precast concrete or steel beams supported by columns, with electric multiple units that are either rubber-tired or steel-wheeled, offering quiet operation, reduced visual obstruction, and the ability to navigate tight curves and steep gradients compared to conventional rail systems. It is often deployed in urban environments for public transportation, airport connectors, or tourist applications due to its efficiency in moving large numbers of passengers with a relatively small physical footprint and lower construction disruption.

The global Straddle Monorail System market size was estimated at USD 325.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.45% during the forecast period.
