## Abstracts

Straight-run asphalt, also known as native asphalt or paving asphalt, is a type of asphalt obtained directly from the distillation of crude oil without further chemical modification. It's a highly viscous, black or dark brown material composed primarily of hydrocarbons. Its properties, such as viscosity and penetration, are determined by the characteristics of the crude oil source and the distillation process. Straight-run asphalt is primarily used in road construction as a binder for aggregates in asphalt pavements. It provides durability, water resistance, and flexibility to the pavement structure.The straight-run asphalt market is influenced by several factors, including infrastructure spending, road construction activity, and crude oil prices. Demand for asphalt is generally tied to economic growth and urbanization, particularly in developing countries where infrastructure development is a priority. A key trend is the increasing focus on sustainable and environmentally friendly asphalt technologies. This includes the use of recycled asphalt materials, warm-mix asphalt techniques to reduce energy consumption during paving, and the development of bio-based asphalt binders to replace or supplement traditional petroleum-based asphalt. Modifications to straight-run asphalt with polymers or other additives are also becoming more common to enhance pavement performance, durability, and resistance to cracking and rutting. The market also faces challenges, such as fluctuating crude oil prices, which can impact the cost of asphalt production. Furthermore, competition from alternative paving materials, such as concrete, can influence the demand for asphalt in certain applications. However, the overall outlook for the straight-run asphalt market remains relatively stable, driven by the continued need for road construction and maintenance globally.

The global Straight-Run Asphalt market size was estimated at USD 1108.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.30% during the forecast period.
