Abstracts

Streak tubes are devices that convert a fast-changing optical signal into an electrical signal that can be recorded and analyzed. Streak tubes use a photocathode to emit electrons when exposed to light, and an electric field to accelerate and deflect the electrons onto a phosphor screen. The deflection of the electrons depends on the time of arrival of the light, creating a streak image that represents the temporal variation of the light intensity. Streak tubes are used for measuring ultrafast phenomena, such as laser pulses, plasma dynamics, or nuclear reactions.
