Streaming software refers to applications and platforms that enable users to broadcast live or pre-recorded audio and video content over the internet in real-time. These tools are widely used by gamers, content creators, educators, and businesses for live streaming on platforms like Twitch, YouTube, Facebook Live, and others. Key functionalities often include screen capture, multi-source input (cameras, microphones), encoding, real-time editing, overlays, and chat integration. The software ranges from free, basic solutions like OBS Studio to premium, feature-rich options like XSplit or Streamlabs, catering to varying levels of technical expertise and professional needs. The rise of remote work, e-learning, and digital entertainment has significantly expanded its applications beyond gaming, making it a critical tool for engagement in the digital era.
