Abstracts

Stretch hooding machinery is an automated packaging system designed to apply a single, tube-like polyethylene film over palletized goods, which is then stretched and heat-sealed to create a tight, protective covering that offers superior stability, weather resistance, and tamper evidence compared to traditional methods like stretch wrapping or shrink hooding. These systems are characterized by their efficiency in material usage, reduced energy consumption due to the absence of heat tunnels (except for the sealing element), and adaptability to various load sizes and shapes, making them particularly suitable for industries handling uniform, high-volume pallet loads such as building materials, chemicals, food and beverage, and logistics.

The global Stretch Hooding Machinery market size was estimated at USD 420.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
