## Abstracts

Stretch Wall and Ceiling is a concept with multiple implications in the construction field. In architectural decoration, it can refer to the installation process of elastic materials such as soft PVC stretch films or fabrics. These materials are heated to soften and then, with the help of professional tools and techniques, are closely attached to the wall or ceiling surface and stretched moderately to remove wrinkles, achieving a smooth and seamless decorative surface with functions like waterproofing and dust - proofing. This is commonly used in places like shopping malls, hotels, hospitals, and food processing factories. It can also pertain to the creation of special shapes. For example, stretchable materials such as metal nets and gypsum boards are used to make domed ceilings or curved walls. Workers stretch and fix these materials according to the design before conducting surface treatment. In the area of building structure repair and renovation, stretching may be involved when repairing cracked or deformed walls and ceilings.

The global Stretch Wall and Ceiling market size was estimated at USD 674.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.70% during the forecast period.
