## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on String Power Conversion System(PCS) competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A string energy storage converter (PCS, Power Conversion System) is a power electronic device used for power conversion and management, and is mainly used in distributed energy storage systems. It can realize the bidirectional conversion of DC and AC between the battery energy storage system and the power grid, and supports functions such as charging, discharging, and energy scheduling. The string design has higher flexibility, reliability, and scalability by connecting multiple independent power modules in parallel, and can adapt to energy storage needs of different scales. Compared with centralized energy storage converters, string PCS performs better in efficiency, fault isolation, and system optimization, and is widely used in household energy storage, industrial and commercial energy storage, and new energy power generation scenarios.

The global String Power Conversion System(PCS) market size was estimated at USD 415.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.90% during the forecast period.
