Report Overview

The string-type solar photovoltaic inverter directly converts the direct current generated by the photovoltaic modules into alternating current, which is then boosted and connected to the grid. String-type solar photovoltaic inverters are not affected by module differences between strings and shadows, and at the same time reduce the mismatch between the best operating point of photovoltaic cell modules and the inverter, and maximize power generation. At the same time, the smaller size and self-consumption can reduce the impact of failures.
