The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Strip Casting NdFeB Alloy competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Strip Casting NdFeB Alloy production reached approximately 32.5 k tons, with an average global market price of around US\$25 per kilogram. Strip casting NdFeB alloy refers to thin intermediate strips of neodymium-iron-boron alloy produced by a rapid solidification process using a rotating metal chill roll. In this process, molten NdFeB alloy is poured onto the surface of a high-speed moving cooling belt, where it solidifies instantly into thin, uniform strips with fine and homogeneous microstructure. This technique minimizes coarse grain formation and elemental segregation, improving subsequent pulverization, compaction, and sintering behavior. It enhances the stability and consistency of magnetic properties, making it widely used in the production of high-performance sintered NdFeB permanent magnets.

The global Strip Casting NdFeB Alloy market size was estimated at USD 812.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.40% during the forecast period.
