### Report Overview

Strip detectors are semiconductor devices used to detect and measure ionizing radiation by converting incident particles or photons into electrical signals. They consist of multiple parallel conductive strips deposited on a semiconductor substrate, enabling precise spatial resolution of particle impacts. Widely employed in high-energy physics, medical imaging (e.g., X-ray and proton therapy), and industrial inspection, these detectors offer high sensitivity, low noise, and the ability to track particle trajectories. The market is driven by advancements in particle physics research, increasing demand for accurate diagnostic tools in healthcare, and stringent quality control requirements in manufacturing. Emerging applications in aerospace and nuclear safety further contribute to growth, though high production costs and technical complexity remain challenges. Key players include semiconductor manufacturers, research institutions, and medical equipment providers competing on precision, durability, and integration capabilities.
