## Abstracts

Strobes are commonly used in sync with digital cameras to provide additional light for photography. They produce a brief burst of intense light that illuminates the subject and helps capture well-exposed images in low-light conditions or to freeze motion. When synchronized with a digital camera, the strobe fires at the exact moment the camera's shutter is open, ensuring that the subject is properly illuminated. This synchronous operation allows photographers to control the lighting and achieve desired effects in their photographs. In this report, the statistical range does not include built-in flashes.
