The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Strong Cation Exchange Agarose Gel competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Strong cation exchange agarose gel is an ion exchange packing material with agarose as the matrix and strongly acidic sulfopropyl ($-\text{CH}_2\text{CH}_2\text{CH}_2\text{SO}_3^-$) groups covalently bonded to its surface. It is a typical strong cation exchange medium. It operates stably over a wide pH range, selectively adsorbing positively charged proteins, peptides, and other biomolecules through electrostatic interactions. Separation and elution can be achieved by adjusting the salt concentration or pH. This gel features high chemical stability, good mechanical strength, fast flow rate, and large binding capacity, and is widely used in protein purification, antibody preparation, biopharmaceutical process development, and laboratory chromatography analysis. It is one of the key materials in modern biological separation and purification technologies. The sales volume in 2024 is 380,000 bottles, the average price is US\$180, the single-line production capacity is 50,000 bottles, and the gross profit margin is 87%.
