## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Strong Neodymium Cylinder Magnet competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Strong Neodymium Cylinder Magnets are high-strength permanent magnets made primarily from an alloy of neodymium (Nd), iron (Fe), and boron (B), commonly referred to as NdFeB. They are engineered in a cylindrical shape to generate concentrated magnetic fields along the axis, making them ideal for precision holding, sensing, and motion applications. The supply chain begins with the mining and refining of rare earth elements (mainly neodymium and praseodymium) from sources in China, Australia, and the U.S., followed by alloy preparation and sintering processes to produce NdFeB magnetic blocks. These blocks are then machined, coated (typically with nickel-copper-nickel or epoxy) to prevent corrosion, magnetized, and assembled into final products. Downstream, they are integrated into electric motors, magnetic couplings, sensors, medical devices, loudspeakers, and industrial tools. Key supply chain participants include rare earth miners, magnet alloy producers, precision machining facilities, and component assemblers serving automotive, electronics, renewable energy, and aerospace sectors. In 2024, global Strong Neodymium Cylinder Magnet production reached about 155,000 tons, with a capacity of 190,000 tons. Prices averaged USD 18,000-46,000 per ton, and the market held a solid 35% gross margin driven by demand from EV, industrial, and electronics sectors.

The global Strong Neodymium Cylinder Magnet market size was estimated at USD 2958.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.10% during the forecast period.
