## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Strontium Metal competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of strontium metal (Sr) will reach 26,400 tons, with an average selling price of US\$9,000 per ton. Strontium metal (Sr) is a silvery white, shiny alkaline earth metal element. It is located at the 38th position in the periodic table and belongs to the second group. It is chemically active and easily loses electrons to form positive ions. Strontium exists in the earth's crust in a combined state, mainly in ores such as celestite (SrSO<sub>4</sub>) and strontianite (SrCO<sub>3</sub>). Strontium is a rare metal that can be widely used in electronics, liquid crystal displays, automobiles, aerospace, military industry, medicine and other industries. It is known as "industrial MSG."

**Investment Risks:** Supply Risk of Strontium Ore: Domestic celestite mines are generally characterized by low grade and high impurity content, leading to a continued increase in import demand, increasing production costs and profitability for companies. Potential Impact from Technologically Substituted Products: With continuous breakthroughs in new materials technology, strontium metal may face competition from technologically substitute products, requiring companies to increase R&D investment and technological innovation to maintain market competitiveness. Market Price Fluctuation Risk: The correlation coefficient between international strontium prices and crude oil prices is 0.68, significantly impacted by factors such as international market dynamics, policy changes, and technological advancements. Companies need to strengthen their risk management capabilities to mitigate the risk of market price fluctuations.

**Investment Opportunities:** Growing demand in new energy vehicles, energy storage, and high-end alloy materials has created new growth areas for the strontium metal market. Breakthroughs in high-purity preparation technology, green smelting technology, and nanomaterial applications have created

new development opportunities for the industry. The deepening implementation of the Belt and Road Initiative and China's growing position in the global industrial chain provide ample space for Chinese strontium metal products to expand into overseas markets.

The global Strontium Metal market size was estimated at USD 238.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.00% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Strontium Metal market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
