Report Overview

Structural ceramics are advanced ceramics with excellent mechanical, thermal, and chemical properties such as high temperature resistance, erosion resistance, corrosion resistance, high hardness, high strength, and low creep rate. They are often used in various structural components.

Structural Ceramics can be divided into two major groups of ceramic materials: oxide ceramics and non-oxide ceramics. The oxide ceramics group contains materials that consist primarily of metal oxides such as aluminum oxide, zirconium oxide, aluminum titanate or dispersion ceramics. Non-oxide ceramics represent a materials group comprised of ceramic materials based on carbon, nitrogen and silicon compounds such as silicon carbide, silicon nitride and aluminum nitride.
