Report Overview

Structural sandwich material is a composite material structure consisting of a layer of lightweight core material sandwiched between two layers of material. Sandwich materials typically consist of two layers of material (called panels) and a lightweight core material sandwiched in the middle (called core layer). The panel can be metal, composite material or plastic, while the core layer is usually light material such as foam, honeycomb structure or fiber reinforced material. Structural sandwich materials are widely used in fields such as aerospace, automotive, construction, shipbuilding, wind power generation, etc., and are used to manufacture structural components with high requirements for lightweight, high-strength, impact resistance, and insulation and sound insulation performance.
