Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Structured Light 3D Camera competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Structured Light 3D Camera is a 3D scanning device that uses projected light patterns and a camera system to measure the three-dimensional shape of objects. Structured light scanning is a 3D scanning technology that uses a single light source to project multiple lines on an object, all of which are tracked simultaneously by a camera or multiple cameras. This is in contrast to laser scanners, which fire multiple laser spots one after the other on an object. Like other types of scanning technology, structured light scanning uses one or more cameras located closer to the light source. The role of the camera is to capture the pattern of light cast onto the surface of the object being scanned: the camera lens will see deformed sets of lines (stretched, widened, bent, moved closer or farther apart, etc.) depending on the shape of the object's surface. Through a series of calculations, the scanner uses the deformed light to work out the position, size and shape of the object being scanned. The Structured Light 3D Camera market is poised for substantial growth driven by the increasing demand for high-precision imaging in industrial automation, robotics, healthcare, and consumer electronics. This technology offers a cost-effective and efficient solution for capturing detailed 3D data, which is essential for quality control, object recognition, and spatial mapping. The market is also benefiting from advancements in artificial intelligence and machine vision systems, which further enhance the performance and applicability of structured light cameras. As industries continue to prioritize automation and smart systems, the adoption of structured light 3D cameras is expected to accelerate, supported by ongoing innovation and a growing ecosystem of supporting technologies.

The global Structured Light 3D Camera market size was estimated at USD 445.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 14.20% during the forecast period.
