Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Structured Light Binocular Camera competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the production of structured light binocular cameras reached 116,260 units, with an average selling price of \$2,673.83 per unit. A structured light binocular camera is an imaging system that combines structured light projection with dual-camera stereo vision to acquire three-dimensional information about a scene. It projects a known light pattern (such as stripes or a grid) onto the scene. Two cameras then capture the projected light pattern from slightly different perspectives, using triangulation principles to reconstruct the scene's depth information and a 3D point cloud.

The global Structured Light Binocular Camera market size was estimated at USD 311.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.70% during the forecast period.
