Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Structured Light Projector competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The structured light projector is a device designed to project a specific pattern of light field. It utilizes an internal optical system and a light source to emit light with a particular spatial structure (such as stripes, grids, etc.) onto the surface of a target object. The projected structured light pattern will deform due to the shape and depth information of the object's surface. By analyzing the deformed structured light pattern and employing corresponding algorithms, accurate three-dimensional morphological information of the object can be obtained. It is widely used in fields such as three-dimensional reconstruction, industrial inspection, and machine vision, providing an efficient and precise means of acquiring object spatial information. Typical products include: Bestintech's PJTRS, etc.

The global Structured Light Projector market size was estimated at USD 595.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
