Report Overview

STTRAM is a type of MRAM which is based on magnetic tunnel junctions (MTJs), with the configuration of 1T1MTJ. In MTJ, two ferromagnetic (FM) layers—one has fixed magnetic orientation, and the other has free magnetic orientation—are usually separated by a tunnel oxide barrier. The parallel magnetic orientation of both FM layers (typically 1–2 nm MgO) is the LRS of the cell, and the anti-parallel magnetic alignment switches the cell in HRS. As compared to typical MRAM design, STTRAM has high scalability, simple architecture, lower power consumption, and faster operation
