## Abstracts

Styrene-ethylene-propylene-styrene, also known as SEPS, is a thermoplastic elastomer (TPE) which behaves like rubber without undergoing vulcanization. SEPS is very flexible, has excellent heat and UV resistance and is easy to process. It is produced by partial and selective hydrogenating of styrene-isoprene-styrene copolymers (SIS)<sup>1</sup> which improves the thermal stability, weathering and oil resistance, and makes SEPS steam sterilisable.<sup>2</sup> However, hydrogenation also reduces the mechanical performance and increases the cost of the polymer. Thermoplastic elastomer TPE-S is a modified alloy elastomer based on SBS, SEBS and other components, with the appearance of transparent or white particles, good color matching, can be matched with black and other colors. As a new type of polymer, TPE-S has the dual performance and wide range of properties of rubber and thermoplastic plastics, and it has the advantages of good mechanical properties, environmentally friendly, easy to process, and a wide range of applications, etc. With its excellent features, TPE-S is regarded as the "third generation rubber" after natural rubber and synthetic rubber. TPE-S is the largest thermoplastic elastomer in the world, with the rapid development of downstream automotive, fiber optic and other industries, the global market demand for TPE-S is constantly released. Globally, TPE-S related manufacturers include American Kraton, American Shell, Japanese Kuraray, Korean LG, Asahi Kasei, Sinopec, LCY CHEMICAL and other enterprises.

The global Styrene Ethylene Propylene Styrenes (SEPS) market size was estimated at USD 295.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
