Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Styrene Indene Resin competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The main chemical components of styrene indene resin are composed of styrene and indene resin, with a relatively low softening point and a viscosity increasing effect comparable to C5 petroleum resin. Styrene indene resin has low softening properties, good flowability, and can improve the wettability of the main material, resulting in good rubber compatibility, excellent viscosity enhancement, and reinforcement effect. It can also improve rubber elasticity, anti peeling properties, and weather resistance and anti-aging effects. At the same time, it has excellent thermal stability, compatibility with rubber, and outstanding initial adhesion performance, so it has good processing performance and has no effect on the modification performance of rubber.

The global Styrene Indene Resin market size was estimated at USD 138.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.20% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Styrene Indene Resin market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
