Report Overview

Styrenic Block Copolymers (SBCs) are high-performance thermoplastic elastomers engineered to improve the performance capabilities of a broad range of end products and applications. SBC is primarily classified into three types, namely styrene-butadiene-styrene block copolymers (SBS), styrene-isoprene-styrene block copolymers (SIS) and styrene-ethylene-butylene-styrene block copolymers (SEBS).

The rising consumption rates of SBC in the healthcare industry is estimated to be one of the major factors that will have a positive impact on the growth of the market. The characteristics such as biodegradability, low drug absorption, high resilience, toughness, optical clarity, and process stability drives the demand for SBCs in the healthcare sector. These copolymers are increasingly used as substitutes of PVC in many tubing applications. Innovations and advancements in the medical sector and the increasing need for enhanced bio-degradable thermoplastic elastomers to manufacture medical bags, medical tubing, and syringes are driving the adoption of SBC in the medical sector.
