Abstracts

Sub 1GHz transmission modules are low-power, long-range wireless communication devices operating in frequency bands below 1 GHz, such as 315 MHz, 433 MHz, 868 MHz, and 915 MHz, which are license-free in many regions. These modules are designed for reliable data transmission over extended distances with minimal power consumption, making them ideal for applications like smart metering, home automation, industrial monitoring, agricultural sensors, and remote control systems. They typically utilize modulation schemes such as FSK (Frequency Shift Keying) or OOK (On-Off Keying) and often incorporate error correction and frequency hopping techniques to enhance robustness against interference. Compared to higher-frequency alternatives like 2.4 GHz, Sub 1GHz modules offer superior penetration through obstacles and longer range, albeit at lower data rates, positioning them as a preferred solution for IoT and M2M communications where bandwidth requirements are modest but reliability and energy efficiency are critical.

The global Sub 1Ghz Transmission Module market size was estimated at USD 485.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
