Submicron spherical alumina is a nanomaterial with a special structure and excellent properties. It is composed of nanoparticles aggregated in a spherical shape, and the particle size is at the submicron level, that is, usually less than 1 micron. This material combines the excellent properties of alumina such as high hardness, high wear resistance, high insulation and high thermal conductivity. At the same time, the spherical shape gives it better fluidity and dispersibility, making submicron spherical alumina have a wide range of application potential in many fields. With the vigorous development of high energy consuming fields such as 5G and new energy vehicles, thermal conductive materials will become key materials, and spherical alumina as the main filling solution is expected to follow the growth of the thermal conductive market and demand will explode. Market drivers Policy support: National policy support for the new materials industry is an important driving force for the development of the submicron spherical alumina market. The government has introduced a series of preferential policies and financial support to encourage enterprises to increase R&D investment, improve product quality and technical level, thereby promoting the rapid development of the entire industry. Miniaturization and complexity of electronic products: With the increasing complexity and miniaturization of the functions of electronic products such as 5G communication equipment and high-end smartphones, the demand for heat dissipation materials is also increasing. Submicron spherical alumina has become one of the key materials for solving the heat dissipation problem of electronic products due to its high thermal conductivity. Therefore, the trend of miniaturization and complexity of electronic products has promoted the rapid development of the submicron spherical alumina market. The rapid growth of the new energy vehicle market: The rapid growth of the new energy vehicle market has provided new application space for submicron spherical alumina. Power batteries are one of the core components of new energy vehicles, and submicron spherical alumina, as a

thermal conductive filler, plays an important role in improving the performance and safety of power batteries. With the continuous expansion of the new energy vehicle market, the demand for submicron spherical alumina will continue to grow. Technological breakthroughs and industrial upgrading: In recent years, with the continuous progress of materials science and preparation technology, the production process and equipment of submicron spherical alumina have been continuously optimized and upgraded. This makes the product quality more stable and the production cost gradually reduced, thereby enhancing the market competitiveness of submicron spherical alumina. At the same time, industrial upgrading has also promoted the development and improvement of related industrial chains, providing strong support for the further expansion of the submicron spherical alumina market. In summary, submicron spherical alumina, as a new material with special structure and excellent performance, has broad application prospects in many fields. Driven by multiple factors such as policy support, miniaturization and complexity of electronic products, rapid growth of new energy vehicle market, technological breakthroughs and industrial upgrading, its market prospects will be broader.

The global Sub-micron Spherical Alumina market size was estimated at USD 198.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.70% during the forecast period.
