Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Sublingual Thin Films competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Sublingual Thin Films are a type of oral drug delivery system consisting of ultra-thin, flexible sheets designed to be placed under the tongue (sublingual mucosa). These films are formulated with active pharmaceutical ingredients (APIs) and dissolvable polymers, allowing the drug to be rapidly absorbed through the rich network of blood vessels in the sublingual area. This bypasses the digestive system and first-pass metabolism in the liver, enabling faster onset of action compared to traditional oral tablets or capsules. They are often used for drugs requiring quick absorption (e.g., anti-anxiety medications, pain relievers, or emergency treatments) and offer advantages such as ease of administration, precise dosing, and suitability for patients with difficulty swallowing.

The global Sublingual Thin Films market size was estimated at USD 1419.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.20% during the forecast period.
