Report Overview

A submarine is an underwater naval platform that can stay submerged for extended periods and is deployed for multiple defense functions. It is considered crucial for a nation's maritime security and is used for both offensive and defensive purposes.

Submarines are designed for greater agility and stealth capabilities. These vessels are armed with powerful weapons such as missiles and torpedoes.

The growing demand for unmanned underwater vehicles (UUVs) has been a key growth driver for this market. UUVs have extensive applications in naval intelligence, mine countermeasures operations, surveillance and reconnaissance, and anti-submarine warfare missions. In maritime operations, UUVs are primarily designed for underwater surveillance, hull inspection, dock inspections, and underwater mines deactivation. Also, these UUVs are fitted with high-definition cameras that send visual data from the UUV to the operator. With better images and improved control of the vehicle, a better inspection of the underwater environment is possible which aids in naval operations. Recently, there has been an increased usage of these unmanned vehicles for electronic attack, communication transfer, combat, search, and rescue missions, and C4ISR operations. Thus, the increasing activities related to seabed mapping and mining will propel the market for submarines during the forecast period.
