## Abstracts

Submerged arc welding wire is used in submerged arc welding of metal filler material, suitable for carbon steel and low alloy steel welding, through the arc heat to melt and form a weld with the workpiece. The choice of welding wire should be used in conjunction with a specific flux to ensure weld quality. Flux is used in the process of submerged arc welding of granular material, when welding it will form a layer of coating around the arc, the cover melts at high temperature become slag, cover on the molten metal, to prevent its contact with the air and produce oxidation or nitridation, participate in metallurgical reaction at the same time, adjust the weld metal composition and performance. The proper combination of welding wire and flux is crucial to ensure welding quality and efficiency. This combination not only helps to protect the molten pool, but also improves the welding process characteristics, such as enhanced arc stability, promote deoxidation and control of weld formation.

The global Submerged Arc Welding Wire and Flux market size was estimated at USD 367.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
