Abstracts

Submersible mixed flow pump is a kind of high-efficiency and energy-saving water pump equipment that combines the characteristics of centrifugal pump and axial flow pump. The structure of submersible mixed flow pump includes motor, impeller, mixer and pump casing. The motor is a submersible structure, which is directly placed in the water for operation; the impeller adopts centrifugal or mixed flow design, which can produce a large flow and a low head; the mixer plays a role in guiding the water flow and improving the efficiency of the pump; the pump casing is used to protect the internal structure of the pump and prevent water leakage. It is suitable for large flow, medium and low head conditions, and is widely used in marine engineering, municipal construction, industry and other fields.
