Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Submucosal Injectable Composition competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A Submucosal Injectable Composition is a specially formulated injectable solution or gel used during gastrointestinal endoscopic procedures?primarily Endoscopic Mucosal Resection (EMR), Endoscopic Submucosal Dissection (ESD), and polypectomy?to create a temporary submucosal cushion between the mucosal layer and the muscularis propria. This composition is injected via the endoscope to elevate lesions, enabling safer and more precise resection while minimizing the risk of complications such as perforation or thermal injury. In 2024, global Submucosal Injectable Composition sales volume reached approximately 1,226.9 k units, with an average global market price of around 91.80 US\$ per unit. 1. Increasing Adoption of EMR and ESD as Standard Treatments for Early Gastrointestinal Lesions One of the strongest drivers of the submucosal injectable composition market is the rapid global adoption of minimally invasive endoscopic therapies?specifically Endoscopic Mucosal Resection (EMR) and Endoscopic Submucosal Dissection (ESD)?for the treatment of early-stage gastrointestinal cancers and large precancerous polyps. As colorectal, gastric, and esophageal cancer screening programs expand, more early lesions are being detected that are treatable via endoscopy rather than surgery. EMR and ESD require the creation of a submucosal cushion to safely elevate the mucosa, minimize perforation risk, and allow for precise dissection. Because these procedures rely on reliable, durable, and biocompatible injectable compositions, the rising global volume of therapeutic endoscopy directly drives demand for advanced submucosal injectates. 2. Technological Advancements and Clinical Preference for Longer-Lasting, High-Viscosity Formulations Another major market driver is the increasing shift toward advanced, high-

viscosity submucosal injectable compositions designed to provide prolonged and stable mucosal elevation. Traditional agents such as saline require repeated injections and offer limited procedural support, especially in long, complex ESD cases. In contrast, formulations containing hyaluronic acid, sodium alginate, synthetic polymers, or proprietary gels (e.g., Eleview?, LiftUp?, ORISE?) offer superior lift duration, improved visualization, and fewer reinjections?leading to shorter procedure times and lower complication rates. As endoscopists prioritize both efficiency and safety, hospitals increasingly adopt premium injectable compositions despite their higher unit cost. The trend toward better clinical outcomes, reduced operator fatigue, and improved workflow in high-volume GI centers continues to accelerate the transition to advanced submucosal lifting formulations.³

Expansion of Endoscopy Infrastructure and Therapeutic GI Capabilities in Emerging Markets

The submucosal injectable composition market is also driven by rapid expansion of gastrointestinal endoscopy infrastructure in emerging economies such as China, India, Southeast Asia, the Middle East, and Latin America. Governments and private healthcare systems are heavily investing in early cancer detection, modern endoscopy suites, and specialist training programs, which dramatically increases the number of EMR and ESD procedures performed. As these regions transition from basic diagnostic endoscopy to more advanced therapeutic interventions, hospitals begin routinely procuring submucosal injectable compositions as standard tools. In parallel, improved reimbursement frameworks and increasing patient preference for minimally invasive procedures further stimulate demand. This geographic expansion of endoscopic therapy represents a long-term, high-growth driver for the global market, creating opportunities for both established brands and emerging local manufacturers.

The global Submucosal Injectable Composition market size was estimated at USD 113.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.70% during the forecast period.
