Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Submucosal Tissue Lifting Agent competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Submucosal Tissue Lifting Agent is a medical device that is an injectable liquid composition intended for use in gastrointestinal endoscopic procedures for submucosal lift of polyps, adenomas, early stage cancers or other gastrointestinal mucosal lesions, prior to removal with a snare or endoscopic device. In 2024, global Submucosal Tissue Lifting Agent sales volume reached approximately 1,226.9 k units, with an average global market price of around 91.80 US\$ per unit. With the continuous advancement of medical technology, submucosal tissue lifting using injection agents has emerged as an innovative medical approach, garnering increasing attention and adoption. This technique involves injecting specific solutions into the submucosal layer, causing localized tissue elevation to facilitate diagnostic, therapeutic, and surgical procedures under endoscopic guidance. This method holds potential advantages in early screening and treatment of gastrointestinal pathologies, not only enhancing lesion visibility but also reducing surgical risks and recovery times. The market for this technology is exhibiting a steady growth trajectory, driven by its application prospects in the field of minimally invasive interventions. As awareness of health rises and the demand for early disease diagnosis and treatment increases, the development and application of submucosal tissue lifting solutions have gained momentum. Simultaneously, ongoing innovations in medical devices and pharmaceuticals provide robust support for the refinement and wider adoption of this technique. However, challenges such as standardization of technical protocols and accumulation of clinical evidence still exist in the market, necessitating close collaboration between relevant manufacturers and healthcare institutions to collectively propel the advancement of this

field.1. Growing Burden of Gastrointestinal Cancers and Increased Use of Minimally Invasive Endoscopic TherapiesThe global rise in gastrointestinal cancers?especially colorectal, gastric, and esophageal cancers?is a major driver of demand for submucosal lifting agents. With screening programs expanding and detection improving, more early-stage lesions suitable for endoscopic removal are being identified. Endoscopic Mucosal Resection (EMR) and Endoscopic Submucosal Dissection (ESD) are increasingly replacing traditional surgical interventions because they reduce complications, shorten recovery time, and lower overall healthcare expenditure. These procedures require submucosal lifting agents to create a safe dissection plane and minimize the risk of perforation, making them an essential component of modern therapeutic endoscopy. As the incidence of GI cancers continues to rise?particularly in aging populations?the volume of endoscopic resections will grow accordingly, directly driving the market for high-performance submucosal lifting agents.

2. Technological Advancements and Increased Adoption of High-Viscosity, Long-Duration Commercial AgentsAnother major driver is the shift from basic saline injections to advanced, high-viscosity lifting agents designed to maintain a more durable and stable submucosal cushion. Innovations such as Eleview?, LiftUp?, and specialized hyaluronic-acid formulations significantly improve procedural efficiency by reducing the need for repeated injections, enhancing lesion visualization, and enabling safer dissection. These benefits are particularly valuable in complex ESD cases where precision is critical. As healthcare providers increasingly prioritize procedure quality, efficiency, and patient safety, they are willing to invest in premium lifting agents that improve clinical outcomes. Hospitals and endoscopy centers also recognize that shorter procedure times and reduced complication rates translate into better operational throughput, further accelerating the adoption of technologically advanced submucosal lifting solutions.

The global Submucosal Tissue Lifting Agent market size was estimated at USD 113.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.70% during the forecast period.
