Abstracts

Submarine cable moulding service refers to a series of process services for processing and assembling submarine cables according to specific design requirements. These services include customized production of cables, such as arranging, connecting and packaging cable components of different types and specifications (such as conductors, insulation layers, sheaths, etc.) according to the requirements of design drawings to form submarine cable finished products that meet specific technical specifications and functional requirements. Forming services are usually carried out in professional cable manufacturing factories to ensure the quality and performance of the cables. Gross profit margins average between 45% and 60%.The upstream of the subsea cable moulding service industry chain mainly relies on mold materials such as polyurethane and epoxy resin, as well as key components such as injection molding machines, hot press molds, cable connectors, sealing rings, and reinforcing steel wires to construct high-strength, corrosion-resistant underwater connection structures. Downstream applications are widely used in subsea communications, offshore wind power, oil and gas platforms, scientific research and exploration, and military systems, ensuring the stable operation of cables in complex marine environments. Future development will focus on improving on-site construction efficiency through modular rapid prototyping technology, embedding smart sensors for real-time monitoring, integrating with ROV/AUV to achieve automated underwater operations, and promoting the replacement of traditional encapsulation resins with environmentally friendly materials to achieve green and efficient subsea connection solutions.

The global Subsea Cable Moulding Services market size was estimated at USD 557.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.00% during the forecast period.
