## Abstracts

A cable protection system (CPS) protects subsea power cables against various factors that could reduce the cable's lifetime, when entering an offshore structure. When a subsea power cable is laid, there is an area where the cable can be subjected to increased dynamic forces the cable is not necessarily designed to withstand over its lifetime. Growing Demand for Renewable Energy: The expansion of offshore wind farms and the interconnection of renewable energy sources drive the demand for subsea cables and, consequently, subsea cable protection systems to safeguard these critical infrastructures. Expanding Offshore Oil and Gas Exploration: Ongoing exploration and drilling activities in offshore oil and gas fields require subsea cables for power transmission, data communication, and control systems. The need to protect these vital cables propels the demand for CPS. Telecommunication Network Expansion: The continuous expansion and modernization of global telecommunication networks, especially across oceanic regions, necessitate subsea cables for high-speed data transmission. To protect these communication cables, CPS is essential.

The global Subsea Cable Protection System (CPS) market size was estimated at USD 703.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
