## Abstracts

Subsea leak detection service is a professional service that monitors subsea pipelines, oil wells and other facilities to detect and determine whether there is a leak. It is of great significance. Subsea oil and gas pipelines are the main application objects of subsea leak detection services. Since subsea oil and gas pipelines are in a high-pressure, high-temperature, and highly corrosive environment for a long time, they are easily affected by various factors and leak, such as pipeline corrosion, external force damage, welding defects, etc. Therefore, regular leakage detection of subsea oil and gas pipelines and timely detection and repair of leakage points are of great significance to ensure the safety and stability of oil and gas transportation. Substances leaked from the seabed, such as oil and natural gas, will cause serious pollution and damage to the marine ecological environment. Timely detection and treatment of leakage problems can reduce the pollution of the marine environment by leaked substances and protect the balance and stability of the marine ecosystem.

The global Subsea Leak Detection Services market size was estimated at USD 247.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
