Report Overview

A Subsea Power Cable is a transmission cable for carrying electric power below the surface of the water. The purpose of submarine power cables is the transport of electric current at high voltage. The electric core is a concentric assembly of inner conductor, electric insulation and protective layers (resembling the design of a coaxial cable). Modern three-core cables (e.g. for the connection of offshore wind turbines) often carry optical fibers for data transmission or temperature measurement, in addition to the electrical conductors.

The global Subsea Power Cable market size was estimated at USD 7890 million in 2023 and is projected to reach USD 13558.06 million by 2032, exhibiting a CAGR of 6.20% during the forecast period.
