## Abstracts

Subsea titanium materials refer to titanium and titanium alloys used in deep - sea equipment. These materials can withstand huge water pressure and long - term corrosion when exposed to seawater. Titanium is regarded as an ideal material for deep - sea applications due to its high strength - to - weight ratio, excellent corrosion resistance and high - pressure resistance, thus earning the title of "marine metal". Although the demand for titanium in shipbuilding and marine engineering only accounts for 3 - 7% in the demand structure, far less than 50% in the chemical industry and 20% in aerospace, with the increase in deep - sea resource development, the application prospects of titanium and titanium alloys are broad.

The global Subsea Titanium Materials market size was estimated at USD 1099.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.70% during the forecast period.
