### Report Overview

The flowline is also called the production line or import line in some cases and is separate from the pipeline system. Risers connect the flowlines to the surface facility. They provide transportation of the production fluid, as well as transporting injection fluids, control fluids and gas lift to the subsea system.

Escalating demand for oil and gas coupled with increasing deep sea developments has facilitated growth in the market for SURF (subsea umbilical, riser and flowline).

Increasing demand for using capital intensive techniques in unconventional sources, and increase in deep water explorations to increase oil productivity has further accelerated SURF installations in the offshore oil and gas production projects.
