Abstracts

Automated optical inspection (AOI) refers to a detection method that obtains the image of the object to be tested through optical imaging, processes and analyzes it through a specific algorithm, and compares it with the standard template image to obtain the defects of the object to be tested. By replacing appearance inspections such as manual scratches with the AOI system, the speed and quality of product output can be improved, thereby reducing the output of scrapped products and reducing labor costs. 3D AOI combines algorithm technology and optical imaging technology to perform all-round and high-precision automatic inspection technology for objects in three dimensions. 3D AOI plays an important role in the field of advanced packaging. AOI systems are divided into 2D and 3D. The core difference lies in accuracy, algorithm and detection effect. 2D AOI is a plane detection; while 3D AOI is the latest three-dimensional detection technology, which can detect items such as substrate bump height and substrate warpage. The core companies of global substrate 3D AOI equipment are mainly Camtek, TAKAOKA TOKO, CIMS, Ideal Vision and Saki Corporation, etc. The market is relatively concentrated, and the top 5 companies have a share of more than 65%.

The global Substrate 3D AOI Equipment market size was estimated at USD 253.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.10% during the forecast period.
