Report Overview

The subway line platform screen door refers to the glass curtain wall on the platform surrounding the railway platform and the train landing space. Shielding door is a device installed on the subway platform near the side edge of the track to isolate the platform area from the track area. When the train arrives, open the electric door on the glass curtain wall for passengers to get on and off the train. The main purpose of setting the shielding door is to prevent people from falling into the track and prevent accidents, reduce the operating energy consumption of the air conditioning and ventilation system of the station, and reduce the impact of train noise and piston wind on the station. Delays in operation due to platform accidents, improves rail transit service levels, and creates necessary conditions for unmanned rail transit systems
