Abstracts

Subway platform screen doors (PSDs) are physical barriers installed along the edge of subway platforms that align with train doors when a train is correctly berthed; they serve as a safety system to prevent passengers from falling or intentionally entering the tracks, reduce accidental delays caused by foreign objects, improve climate control within stations by isolating platforms from tunnels, lower energy consumption, and minimize noise and dust pollution. These systems typically consist of fixed panels and movable doors synchronized with train arrival and departure, and they are increasingly integrated with automated train operation technologies to enhance overall metro system efficiency and passenger safety.
