Abstracts

Sucker rod pumps (SRPs) are a type of artificial lift system widely used in the oil and gas industry to extract crude oil from wells where natural reservoir pressure is insufficient to bring fluids to the surface. The system operates through a surface pumping unit that drives a reciprocating downhole pump via a series of sucker rods, creating the necessary lift to transport oil, water, and gas up the wellbore. Known for their reliability, adaptability to various well conditions, and relatively low operational costs, SRPs remain one of the most common and economically viable methods for onshore production, particularly in mature or stripper wells with moderate production rates.

The global Sucker Rod Pumps (Srp) market size was estimated at USD 1820.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
