Abstracts

Sugar derived surfactants, also known as bio-based or green surfactants, are surface-active agents produced from renewable carbohydrate feedstocks, primarily sucrose, glucose, or other plant-based sugars, through processes such as fermentation or chemical modification. These surfactants function similarly to petroleum-based counterparts by reducing surface tension between liquids or between a liquid and a solid, making them essential components in formulations requiring emulsification, foaming, wetting, or cleaning properties. Their key distinction lies in their sustainable origin, biodegradability, and reduced environmental footprint, positioning them as eco-friendly alternatives in industries increasingly driven by regulatory pressures and consumer demand for natural and sustainable ingredients. Common types include alkyl polyglucosides (APGs), sophorolipids, and sucrose esters, which are utilized across diverse applications including personal care products, household detergents, industrial cleaners, and agrochemicals due to their mildness, compatibility with sensitive skin, and effectiveness even in hard water conditions.

The global Sugar Derived Surfactant market size was estimated at USD 128.46 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.15% during the forecast period.
