Report Overview

Sugar Free Gum is a soft, cohesive substance designed to be chewed without being swallowed. Modern Sugar Free Gum is composed of gum base, sweeteners, softeners/plasticizers, flavors, colors, and, typically, a hard or powdered polyol coating. Its texture is reminiscent of rubber because of the physical-chemical properties of its polymer, plasticizer, and resin components, which contribute to its elastic-plastic, sticky, chewy characteristics. Sugar Free Gum base is a natural gum called chicle harvested from the sap of a tropical tree called a sapodilla tree. This kind of gum is chewy but it will not blow a large bubble. Bubble gum base, on the other hand, is a mixture of starches and polymers made in a laboratory and specially formulated to blow bubbles.
