Abstracts

Sugar polyols, also known as polyhydric alcohols or sugar alcohols, are a group of sugar substitutes that are used as sweeteners and bulking agents in various food products. Despite the name, sugar polyols are not alcoholic beverages; they are a type of carbohydrate with a chemical structure that partially resembles both sugars and alcohols. Sugar polyols occur naturally in some fruits and vegetables, and they are also produced through industrial processes. The increasing awareness of health and wellness has led to a growing demand for sugar-free and low-calorie food and beverage products.
