## Abstracts

Sugar processing enzymes refer to a class of enzymes that play a crucial catalytic role in the sugar processing process. They can accelerate the chemical reactions between sugar molecules, improving processing efficiency and product quality in the sugar industry. These enzymes are widely used in starch hydrolysis to produce monosaccharides such as glucose and fructose, as well as in the conversion of disaccharides such as sucrose and maltose. They are typically derived from microorganisms, plants, or animals and are processed through extraction, purification, and formulation. The use of sugar processing enzymes can not only increase sugar yield and purity but also reduce energy consumption and wastewater discharge, supporting green production in the sugar industry.

The global Sugar Processing Enzymes market size was estimated at USD 617.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
