Report Overview

Titanium Tetrachloride, also titanium tetrachloride, is the inorganic compound with the formula $TiCl_4$. It is a colorless liquid with a penetrating odor. Titanium tetrachloride does not exist naturally in the environment but is man-made using minerals that contain high levels of titanium. Titanium tetrachloride ($TiCl_4$) is used mainly in the chemical industry as an intermediate in the production of titanium dioxide and titanium metal in the form of sponge or powders. $TiCl_4$ is also used in the manufacture of catalysts and as a glass and metal surface treatment. Because of its hazard potential, $TiCl_4$ is handled under strictly controlled conditions. The process of producing high-purity titanium tetrachloride by sulfuric acid method is relatively complicated, and it is usually not used directly to produce high-purity titanium tetrachloride, but as an intermediate link in the production process of titanium dioxide. However, through a series of fine processing and purification steps, high-purity titanium tetrachloride can also be prepared from the intermediate product produced by sulfuric acid method.

The global Sulfate Process High-Purity Titanium Tetrachloride market size was estimated at USD 1024 million in 2023 and is projected to reach USD 1267.97 million by 2030, exhibiting a CAGR of 3.10% during the forecast period.
